

METHOD AND FACILITY FOR STORING AND INDEXING WEB BROWSING DATA

ABSTRACT

A method and facility for handling data regarding web activity of a population of users includes recording a selected web activity by a user and determining a cookie associated with the web activity. A plurality of different storage devices are provided. Each storage device is assigned a unique range of cookie values. A data set associated with the selected web activity is stored in the storage device that has an assigned range into which the cookie falls. The data sets are indexed by cookie for retrieval.
